

The STUFFIE PROTOCOL

By Delphina Hayward

It is really important to keep your fuzzy friends clean - so you can stay happy and healthy!

DUST IS MADE UP OF LOTS OF ICKY THINGS LIKE:

When you hug and play with your stuffies... all that dust gets on you!
But it is easy to keep your stuffies in tip top shape.

STEP 1: PUT THEM IN THE FREEZER (IN A SEALED PLASTIC BAG) FOR AT LEAST 24 HOURS. IT'S LIKE A VACATION IN ICELAND!

This is the best way to kill/remove dust mites and eggs. You can also put small and medium stuffies in the washing machine. For best results, wash the stuffie in a pillow case and with a full load of laundry. If you use detergent, make sure it is unscented and less toxic!

We recommend doing this every 3 months - but you can adjust based on how sensitive you are to the dust in your home. Wash them when they are dirty.

STEP 2: IMMEDIATELY PUT COLD OR WET STUFFIES IN THE DRYER TO SHAKE OFF ANY EXCESS DUST AND KEEP THEM FROM DEVELOPING MOLD!

Freezing/washing and drying is the best combo for healthy stuffies! But freezing them and then putting them in the dryer on low or no heat is typically the best solution. Large stuffies that can't fit in the freezer or be washed can still be put in the dryer on low or no heat.

Many stuffies have plastic parts, so be sure to use low or no heat so they don't melt!
